DEER SCRAM™ PROFESSIONAL

RABBIT SCRAM™ PROFESSIONAL

Deer and rabbits are creatures of habit. Those wild woodland crops that were in abundance just a few short weeks ago are now growing scarce, hidden beneath matted leaves and snowfall. As a result, the animals have added your ornamental shrubs, trees and cold-weather vegetable gardens to their wintertime menu. Once they've found a food source, they'll return to yards, gardens and grain fields to feed during the winter and remember to come back in the spring.

DON'T LEAVE YOUR PLANTS UNPROTECTED!

FOR MILD SNOWFALL REGIONS:

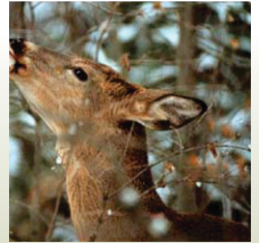

Professional Deer and Rabbit Scram will still be effective under 6 inches of snow. You will need to reapply if a crust forms on top of the snow from the melting and freezing effect.

- Apply 24 inch band along the perimeter of the landscaped areas.
- For trees and shrubs that are open to damage: apply 2 feet outside of the drip line of the tree or shrub

FOR REGIONS THAT GET CONTINUOUS AND HEAVY SNOWFALL:

- **Best applied in Late Fall:** Fill stockings or sock with 1 scoop of Professional Deer or Rabbit Scram.

- **Trees or shrubs in middle of property:** Attach 2-4 filled stockings or socks (depending how large they are) to the outside branches of the tree or shrub.
- **For landscaped areas or flower beds:** Attach stockings or sock to stakes or poles so they will be above the accumulation of the snow. Drive the stakes or poles into the ground no more than 8 feet apart along perimeter of the areas.
- Refill the stockings or socks 60 days apart.
